

NEOBATAIN™

SPARES THE ESSENTIAL NUTRIENTS Keeps Consistency in Performance

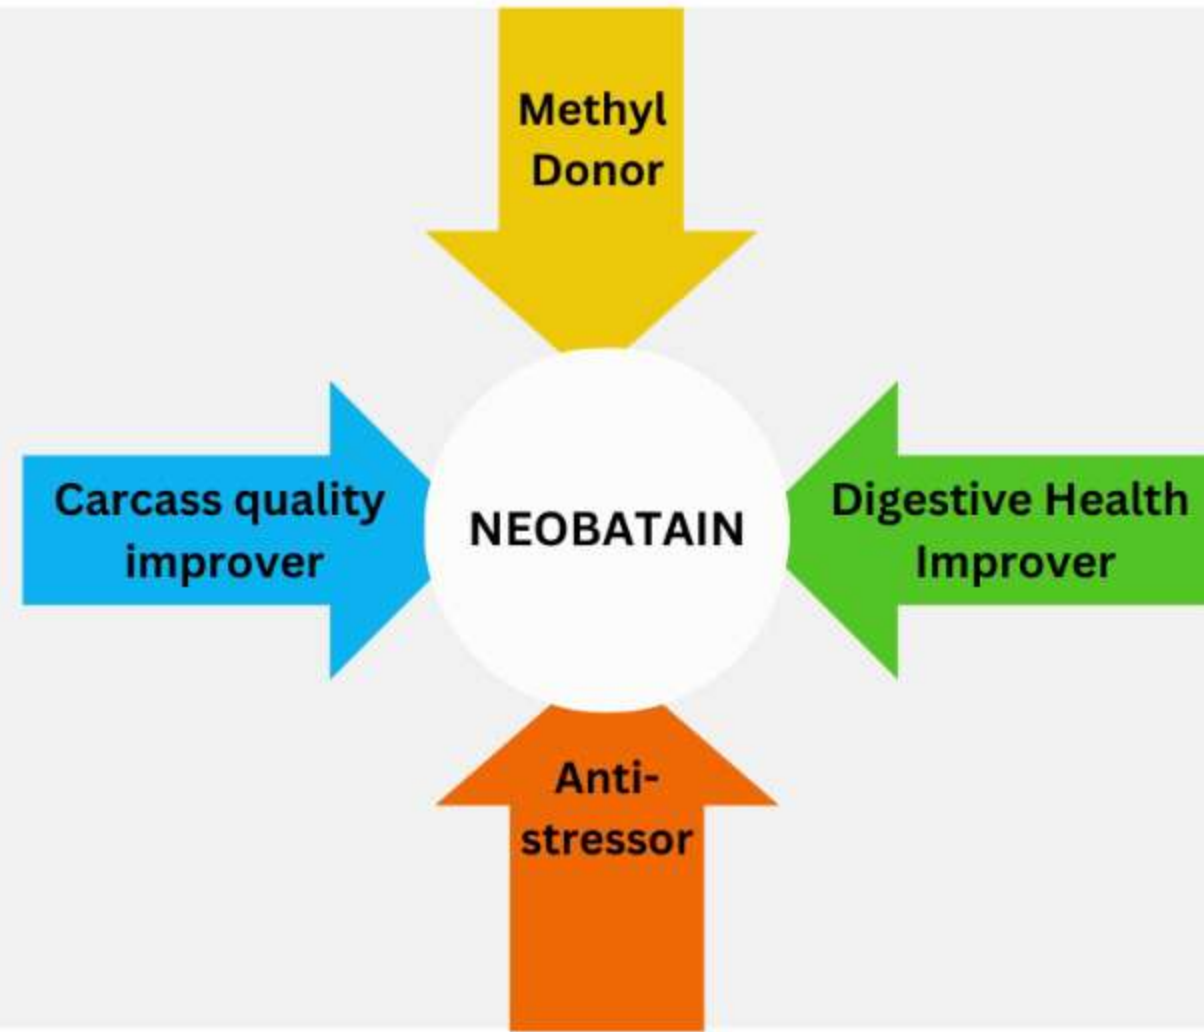

Neobatain is Betain HCl 98% which acts as methyl donor and inside body through series of biochemical reaction converts into several biochemical substances like methionine, creatine, carnitine, adenylyl triphosphate and phosphatidylcholine etc.

- Acts as osmolyte-superior antistressor.
- Methyl donor- Spares methionine and choline to play primary roles.
- Maintains gut integrity- Reduces gut lesion score.
- Improves carcass quality- Increase breast meat yield% and reduces carcass fat%.

NEOBATAIN™

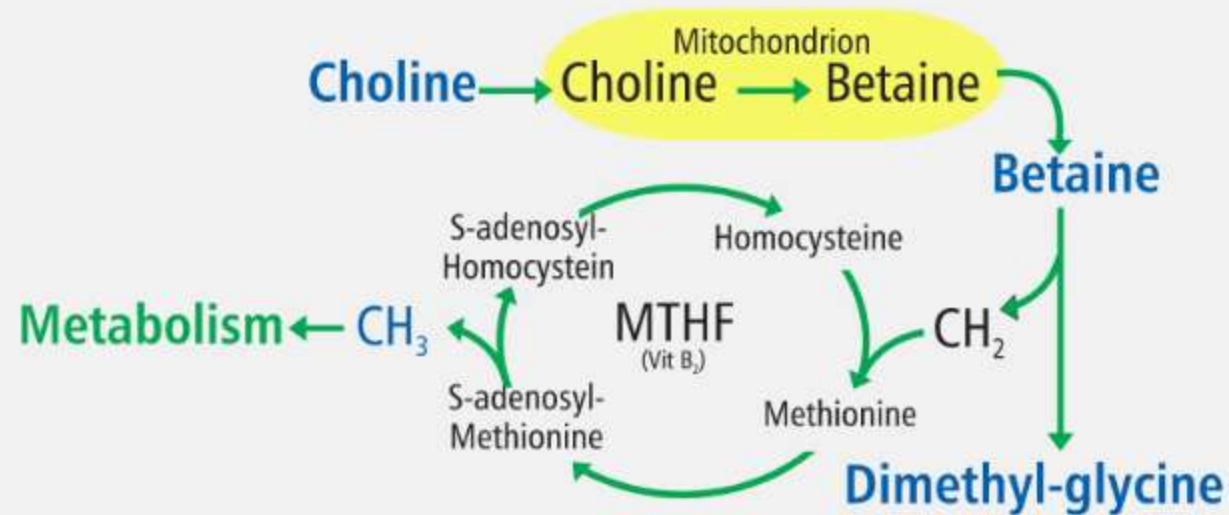

Betaine HCl 98% for Better performance and profitability

- Supplies methyl groups to partially replace methionine and choline
- Acts as antistressors and improves influx of water in cell-corrects dehydration.
- Enhances mobilization of fat from liver and tissue improves carcass yield
- Improves gut health and reduces intestinal lesion score
- Improves weight gain and FCR in broiler and laying percentage in layer and breeder flocks

In vivo Neobatain converts into methionine thereby spares methionine for protein synthesis

Methyl groups are generated for several reactions, such as synthesis of carnitine and Phosphatidyl Choline. Both Carnitine and Phosphatidyl Choline are important for preventing fatty liver condition.

Key Features:

- Crystalline powder with excellent flowability
- Heat Stability
- Non-hazardous- safe in use
- Betaine HCl 98% is equivalent to 75% pure betaine

Usage Instruction:

500 gm to 1 Kg per ton of feed or as suggested by nutritionist. Inclusion depends on percentage replacement of methionine or choline in diet

Presentation:

25 kg Bag
