Salinobacc

Salinomycin Sodium 12% w/w

www.nutriaid.co

Salinobacc

Salinobacc is a feed additive which prevents coccidiosis in chicken.

Composition:

Salinobacc contains 120 gm of Salinomycin sodium per kg of premix.

Salinomycin is a ionophoric coccidiostat, used frequently as a dietary supplement in poultry feed to treat Infection with coccidia.

Salinobacc

*An experimental bacterial study was performed in isolators, and bacterial microflora were analyzed using quantitative cultivation, denaturant gradient gel electrophoresis, cloning, and sequencing.

It was found that salinomycin decreased the prevalence of *Clostridium perfringens*, and a significant increase in the mean body weight of treated chickens compared to untreated controls was observed.

Salinobacc

Benefits: Improves gut health and reduces incidences of coccidiosis in farm.

Dosage: 500 gm per ton of feed. Ensure thorough mixing with feed.

Packing: 25 Kg Paper Bag
