

# NUTRIBOOST

A Pathbreaking Hepatobiliary, Hepato- Protective, Lipotropic Poultry Feed Supplement To Detoxify Liver To Stimulate Growth, Appetite And FCR

**ADD EXTRA STRENGTH TO YOUR POULTRY**

Tricholine Citrate Inositol	Vitamin E Vitamin B1/B12	Liver Extract Yeast Extract	AMINO ACIDS	CHELATED MINERALS	ELECTROLYTES
--------------------------------	-----------------------------	--------------------------------	-------------	----------------------	--------------

Nutriboost detoxifies the body by increasing the breakdown and elimination of toxic chemicals from the liver and fat tissue. It helps relieve digestive symptoms such as indigestion, abdominal discomfort, flatulence, bloating, constipation and haemorrhoids. It Stimulates regeneration of hepatic cells due to which there is improvement in production and hatchability of birds.

Mechanism of action: Nutriboost acts as a liver tonic and immunomodulator in four ways as follows-

**Purification:-** It contains several ingredient that have traditionally been used to promote healthy liver detoxification and the elimination of wastes.

**Directive:-** It improves digestion and liver function.

**Fortification:-** It fortifies the liver by enhancing the scavenging of free radicals, and enhancing immune defense thus acting as a immunomodulator too.

**Sustenance:-** It supports the health and function of the liver cells (hepatocytes), while also helping to relieve digestive symptoms such as dyspepsia (indigestion), abdominal discomfort, flatulence, bloating, constipation and haemorrhoids.

- In addition to all this, it also acts as an antioxidant and has anti-inflammatory effect on the liver.
- All these factors are responsible for improving the feed conversion ratio and helping the growth of the poultry. Birds become healthy and active thereby giving better performance in production and hatchability.

## SPECIAL FEATURES

- Nutriboost stimulates liver and kidney function & improves fat metabolism.
- Nutriboost increases synthesis of glutathione.
- Nutriboost Promotes hepatic tissues regeneration & enhances protein synthesis.
- Nutriboost Prevents toxic metabolic hepatic damage (e.g. fatty liver & kidney syndrome.)
- Nutriboost slows or even reverses hepatic fibrosis in C.R.D.
- Nutriboost reduces collagen accumulation in animal model of cirrhosis.
- Nutriboost improves egg shell quality & reduces thin shelled and broken eggs.
- Nutriboost prevents fat accumulation & maintains good functional capacity of the liver.

**USAGE INSTRUCTIONS :** Broiler : 10ml /100 birds / day from seventh day till marketing

layers : 15/20 ml / 100 birds for liver stimulation

Large & small animals : 6ml per 100 kg of body weight

Shrimp & Fish : 2 ml per kg. of feed

**OR AS RECOMMENDED BY THE VETERINARIAN.**

**PACKING :** 5 Ltr.
